REPORT
Births, Marriages, and Deaths
ONTARIO
1904

REPORT

RELATING TO THE REGISTRATION OF

Births, Marriages and Deaths

IN THE

Province of Ontario

FOR THE

Year Ending 31st December,

1904.

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO:

Printed and Published by L. K. CAMERON, Printer to the King's Most Excellent Majesty,
1906.

WARWICK BRO'S & RUTTER, LIMITED, PRINTERS
TORONTO

LETTER OF TRANSMISSION.

TO HIS HONOUR W. MORTIMER CLARK,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR,—

I herewith beg to present for your consideration the Thirty-fifth Annual Report of the Registrar-General, relating to the registration of births, marriages and deaths in the Province of Ontario during the year 1904.

Respectfully submitted,

W. J. HANNA,

Registrar-General of Ontario.

SIR,—I have the honor to submit for your approval and submission to His Honor, The Honourable William Mortimer Clark, Esquire, Lieutenant-Governor of Ontario, the Thirty-fifth Annual Report made in conformity with and under The Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario for the year ending December thirty-first, 1904.

I have the honor to be,

Sir,

Your obedient servant,

A large, elegant handwritten signature in dark ink, reading "Charles Rodgett". The signature is written in a cursive style with a prominent loop at the end.

Deputy Registrar-General.

HON. W. J. HANNA,
Registrar-General of Ontario.

REPORT

TO

The Honourable W. J. Hanna,

Registrar-General of the Province of Ontario.

(1904)

BEING THE THIRTY-FIFTH ANNUAL REPORT.

SIR,—I have the honor to submit to you the following Report on the estimated population, and on the births, marriages and deaths registered in the Province of Ontario during the year 1904.

POPULATION.

Following the practice adopted in the report of last year, the population of the Province is estimated by geometrical progression. Estimated in this manner the population amounted to 2,203,968. The population of the cities of the Province has been computed separately this year upon geometrical progression as based on the census returns of the year 1901, and while thus estimated there is apparently a greater increase in this group than that estimated for the Province as a whole, yet the figures here given are more accurate than if the total increase was divided or apportioned to them. This increase of the population of the cities is not due so much to a birth increase as it is to an influx of population from the rural municipalities, yet for purposes of estimating the birth, death and marriage rates, these figures will give rates more accurate than under the method heretofore adopted.

BIRTHS.

The tables referred to in this paragraph are Nos. 1, 2, 3, 4, 5 and 6.

During the year 1904 there were registered 50,265 births, (including still births) being male and female infants which represents a birth rate of 22.8 per 1,000 of the population (Table 1), which is an increase of 0.7 per thousand over the preceding year and 1.1 per thousand over the registration of the year 1902. Although this birth rate is not as high as that of the Province of Quebec, yet must be considered satisfactory owing to the fact that a constant drain is taking place of young men of a marriagable age to the western provinces of the Dominion, where ultimately they settle down and marry thus materially reducing the numbers of that class of the population upon which an increase is dependent. The older couples; those who have passed the child-bearing period of life being left in Ontario, and considering further that it is not "the fashion" of the present day to have a family of more than one or two, the returns for 1904 must be looked upon as comparatively satisfactory, and we may feel thankful that the desire for the comforts and pleasures of a married life free from all "encumbrances" apparently is not making rapid headway in the community, and there are those

in our midst possessed with a due sense of their responsibility to the state and the benefits to be derived from a course of non interference with the laws of nature.

Births by Counties.—The returns of the forty-four counties will be found in Table No. 1. Of these, 33 show an increase over the returns of the preceding year—those with an increase of one hundred and over being, Bruce, 108; Essex, 117; Middlesex, 114; Northumberland and Durham, 111; Ontario, 189; Peterboro, 103; Thunder Bay 114; Wentworth, 149, and York, 344.

There still continue decreases in the births in the counties of Lanark, Prince Edward and Victoria, all three of which showed a decrease in 1903, but in the newer districts of the province, the birth returns show an increase over the preceding year, particularly is this the case in Thunder Bay District.

The seemingly high birth rates of Algoma, Haliburton, Nipissing, Parry Sound and Thunder Bay are no doubt due to the fact that the population figures are too low, many settlers having gone into these districts since the taking of the last Dominion Census.

Births in Cities.—The returns of the cities will be found in Table No. 2. These show a steady increase; this however may be more apparent than real from the fact the increase in population is often greater than that estimated and consequently the birth rate given is too high. Only in four cities was there a decrease in the number of births registered, viz.: Brantford, Windsor, Chatham and Woodstock.

Births in Towns of over 3,000 population.—This table, No. 3, is slightly altered from that of previous years, in that only those towns with a population of 3,000 and over are given—the 33 towns have an estimated population of 190,536—and the birth rate is 25.1 per thousand of the population or 2.3 per thousand in excess of the average for the province, and 1.9 in excess of the city group. The abnormal rate in some of these towns can be accounted for by an increase in population over that estimated, particularly in the case of the towns of Fort William, Peterboro and Port Arthur where the growth has been abnormal. The decrease of births in some of the towns is due to a movement of population consequent on changed commercial conditions, and is particularly noticeable in the case of Sault Ste. Marie.

Attention is again drawn to the fact that the birth rate in the rural districts is below the average for the province, the difference being the same as in 1903.

Births by Sexes and Months, &c., (Tables 4, 5 and 6).—The proportion of male births to female births has fallen from 105.8 in 1903 to 104.5 in the present year to 100 female births.

The month of November is that in which the fewest number of births occur whilst the maximum is reached in the month of May.

The number of twin births registered during the year has been 57 in excess of the number registered in 1903 and 26 more than in 1902, while of triplets 7 occurred during the year.

Births of Illegitimates.—The number of infants born out of wedlock numbered 798 or 15.8 in every 1,000 births registered. The total increase over 1903 being 16.

MARRIAGES.

The tables referred to in this paragraph are Nos. 1, 2, 3, 7 and 8.

During the year 1904 there were registered 19,789 marriages, being 41 less than were recorded in the preceding year and equal to a rate of 8.9

per thousand of the estimated population, a rate which corresponds very closely to that of 1903 in which there had been a marked increase in marriages over the immediate preceding years.

The figures show that the rate of 1903 has been maintained. Of the total number of marriages, viz., 19,789, there were registered in the cities 6,618 or 33.4 per cent. 2,545 or 12.8 per cent. in the towns and the remainder 53.6 per cent. in the rural districts.

Marriages in Cities.—The returns for the cities were only 18 in excess of those registered in 1903. The rate per thousand of the population being 13.3 per thousand, or 4.4 per thousand in excess of the average for the whole province. The abnormal number of marriages registered in Windsor has again to be noticed—993 or 79.4 per thousand of the population—being greatly in excess of the returns of any other city or town.

Marriages in Towns.—The figures as given under this group of municipalities show that there has been an increase in marriages of 198 over the year 1903, and the rate is the same as the provincial average, 13.3. The most marked increases were those of Lindsay 41, and Peterborough 51. Of the decrease 78 in the town of Sault Ste. Marie is quite noticeable and is no doubt due to the financial difficulties of the most prominent industry, causing many to seek employment elsewhere.

Marriages by Months.—Fashion as well possibly as convenience still makes the leafy months of June dominant as that in which most marriages occur, indeed judging by the returns it is more popular than ever, while May still maintains the position at the foot of the list.

In grouping the returns by quarters it will be noticed that no change has occurred, and a preponderance of marriages take place in the last quarter of the year.

Marriages by Denominations.—A comparison with the returns for the year 1903, will show that no change has taken place in the order of precedence of the Religious Denominations as regards the number of persons of each sect married during 1904. The order being Methodists, Presbyterians, Church of England and Roman Catholic.

DEATHS.

The tables referred to in this chapter are Nos. 1, 2, 3, 9, 10, 11, 12, 13, 14, 15.

The total number of deaths registered from all causes for the province was 30,920. divided as follows among the groups of municipalities:

Cities	8,742
Towns over 3,000 populations	3,364
Townships, including smaller incorporated towns and villages	19,284

The death rate for the province being 14.1 per thousand of the population, an increase of 0.7 per thousand over the rate for the year 1903.

The counties with a higher mortality rate than the average are, Carleton, Frontenac, Leeds and Grenville, Lincoln, Middlesex, Nipissing, Norfolk, Oxford, Perth, Peterboro, Prescott and Russell, Thunder Bay, Welland, Wentworth and York.

The lowest death rate recorded in that of Rainy River District, 10.8 per thousand, while the following counties follow very closely, viz., Grey and Lennox and Addington, 11.1 each. Huron, 11.3, Waterloo 11.5 and Algoma 11.8 per thousand. It will be noted that the death rate for the Rainy River District has increased from 7.9 in 1903 to 10.8, and a study of these returns confirms the theory advanced in the former report that the returns were incomplete.

Death in Cities.—Possibly the accuracy of the returns of the cities, together with the fact that the hospitals located therein for the care of the sick are made use of by the residents of the surrounding districts and the deaths which happen in these institutions are registered in the cities in which they take place, account in a great measure for the marked difference in the mortality of the cities as compared with the province generally. Added to these facts it must be remembered that the rapid growth of many of our cities leads to false deductions as regards birth and death rates, from the fact that our calculations are based on populations below those which actually exist. Taking these facts therefore into account we may safely consider that our cities are no worse than many of those to be found to the south of the boundary line, and considering the risks to life incident upon a city life that the cities of Ontario offer no particular dangers to this class of our population.

Deaths in Towns of 3,000 and over.—This table is slightly different from the former ones in that only towns with a minimum population of 3,000 are enumerated. The table comprises thirty-three towns with an estimated population of 190,536, the death rate being 11.8 per thousand, or 2.3 per thousand less than the provincial average. The municipality in this group with the lowest death rate is Goderich, where in a population of 4,196 only 46 deaths were reported, which is equivalent, to a death rate, of only 10.9 per thousand, which is lower than that recorded in 1903, viz., 13.8. It will be seen that there was a decrease of 12 in the number of deaths over the preceding year, in which year was an increase of 9 over that of 1902. This town is situated in the County of Huron, on the shores of Lake Huron at an altitude of 729 feet above the sea; of the 46 deaths, 5 were those of stillborn children which leaves 41 to be accounted for. Of this number 6 were under 6 months at the time of death, and of the remaining 35, the average age at death was 56, one being of the age of 92, 4 over 80 and 8 of years ranging from 70-80. Tuberculosis claims two—one aged 16 and the other 32.

The apparently high death rates of Fort William, 33.2; Port Arthur, 38.5; Toronto Junction, 38.5, are to be accounted for by the estimated population being largely below the actual population, and in the case of Fort William the increase is also due to the presence of enteric fever there for some time, also to the fact that deaths occur in the hospitals of the two former towns amongst patients brought there for treatment from the surrounding district which is largely unorganized, as well as from the construction camps in the immediate vicinity.

The rate of 28.3 in the town of Hawkesbury corresponds with the high birth rate, and is due to the increased infantile mortality; of the 119 deaths, eleven were stillbirths, and of the remaining 108, 49 or 45.3 per cent. were infants of one year and under, and 18, or 16.6 per cent., were under 10 years of age, while at the other end of the age group, 12 deaths, or 11.1 per cent. were of persons over 70 years of age, the remaining 27 per cent. being between the ages of 20 and 70 as follows: Under 20, 2; under 30, 7; under 40, 8; under 50, 3; under 60, 8; with one who died of consumption whose age is not given. It will thus be seen that in this town alone there is much to be done along the line of the education of the parents, particularly the mothers, in the care and raising of infants, for many of the 49 deaths under one year I am certain could have been prevented if the parents had only known how to rear their babies.

Deaths in Counties during last ten years.—In table No. 9 will be found the average death rate of each county for the past ten years together with

the death rate of each of the years since 1895. The average for the ten years is 12.5 per thousand which has been exceeded in 1897, 1899, 1900, 1901, 1902, 1903 and 1904, while making all due allowance for incompleteness of the returns of the early years of the decade yet I am of the opinion that the present average is too low, and the figures will gradually rise until the average of 1901, viz., 13.1 per thousand which was the census year will be exceeded. It will be seen that those counties in which are included the returns of the larger cities of the province, viz.: York. Wentworth. Carleton, Middlesex and Frontenac show a gradual upward trend in the yearly average rates. York having increased in the ten years from 13.2 per thousand in 1895 to 17.9, and Wentworth from 12.7 to 16.7, while Middlesex has increased from 9.6 to 15.2 and Frontenac from 11.2 to 14.2 per thousand in the same period of time. These counties show but slight change if any over the death rate recorded in the year 1895—for instance the following shows the rate in the former year and the average for the ten years.

County.	Percentage for 1895.	Average for ten years.
Brant	12.1	12.1
Elgin	10.2	10.9
Essex	12.0	12.7
Haliburton	10.7	10.8
Lincoln	13.1	13.7
Waterloo	10.1	10.9

These are counties in which the returns have been accurately made during the period, while on the other hand a study of the table will show the progress made in securing accurate returns as indicated by the figures.

Deaths by Age Groups.—To permit of comparison of the number of deaths at each of the several age groups, the table as submitted last year is again given with the addition of the figures for the year 1904.

Table of Deaths by Age Periods, 1897 to 1904, inclusive.

—	0-1	1-4	5-9	10-14	15-19	20-24	25-29	30-39	40-49	50-59	60-69	70-79	80 and over	Not given	Total.
1897.....	6,185	2,221	806	636	944	1,139	1,192	1,913	1,703	1,833	2,582	3,587	2,707	183	27,633
1898.....	5,976	1,992	761	518	830	1,072	1,013	1,790	1,631	1,865	2,713	3,429	2,635	143	26,370
1899.....	6,342	1,910	762	569	909	1,172	1,049	1,853	1,753	2,926	2,854	4,142	3,122	144	28,607
1900.....	5,174	1,989	803	563	941	1,257	1,083	1,908	1,819	1,931	2,949	3,825	3,099	164	29,494
1901.....	6,543	1,854	816	571	897	1,182	1,009	1,993	1,908	2,135	3,036	4,051	3,336	186	29,608
1902.....	6,003	1,984	826	571	791	1,078	937	1,941	1,927	1,785	2,916	3,636	3,085	264	27,864

1904.....	6,907	1,612	655	552	865	1,205	1,188	2,025	2,033	2,254	3,280	4,518	3,911	285	30,290
Average..	6,228	1,937	787	579	883	1,154	1,069	1,918	1,831	2,107	2,913	3,896	3,146	198	28,638

The total number of deaths for year was in excess of those registered in 1903 by 1,646. Of this increase, 207 were infants under one year of age, the chief increases were in the three age groups between 60 and 80 and over, no less than 89 per cent. of the total increase being in these aged persons, and the majority of these deaths were of persons of 80 and over, clearly indicating that there was in this year some reason for this mortality, while on the other hand the decreases were in the age groups from 1 year to under 20, the chief decrease being those persons of the ages under five and from 5 to 9, the groups influenced mostly by epidemic diseases.

Nativity.—The birthplace of 8,773 or 28.3 per cent. of those who died during the year is given as "foreign" and of this number 2,506 or 28.6 per cent. died as infants having only recently arrived from foreign countries, or

succumbed to the diseases incident to old age. The following are the figures in this connection taken from the returns of the past eight years as showing the relationship between the deaths of native and foreign born.

Year.	Total deaths.	Canadian born.	Foreign born.	Not given.
1897.....	27,633	19,610	7,675	348
1898.....	26,370	18,276	7,636	458
1899.....	28,607	19,644	8,509	454
1900.....	29,494	20,877	8,063	554
1901.....	29,608	20,788	8,245	575
1902.....	27,864	19,569	7,741	554
1903.....	29,664	21,039	8,135	490
1904.....	31,290	21,901	8,773	616

Social Conditions.—The number of married persons dying in the year was 49.9 per cent. being an increase 3 per cent. over those of the previous year, while 45.9 per cent. were unmarried. The remainder being returned as “not stated.”

Deaths by Months.—As is usually the case in the month of June the smallest number of deaths is recorded while the maximim was reached in the month of March. And during the first quarter in the year 28.5 per cent. of the total number of deaths were registered, the minimum number being in the third quarter of the year. Considering the deaths by groups it will be found that the majority of deaths from communicable diseases occurred in the month of January, and the minimum during the month of school vacation, viz., July. To diseases of the nervous system were attributed the maximum number of deaths in the month of March, the minimum occurred deaths from diseases of the circulatory system, and the minimum in July, while diseases of the respiratory system were more fatal in the month of February, 476. The lowest number of deaths being recorded in August, viz., 85. In which month, however, the maximum number of deaths were reported as due to diseases of the digestive system, the minimum in November. The deaths due to accidents were more numerous in the months of July and August, corresponding with the holiday season, when boating and bathing are generally indulged in.

A study of the groups of diseases as adopted some years ago in accordance with an understanding arrived at with the representative of the boards of health, as well as with the federal authorities of the United States, shows that in the first group “Communicable Diseases” there are omitted several which might justly be now classed under this head, viz.: Pyaemia, septicaemia, malarial fever, tuberculosis, syphilis and epidemic cerebrospinal meningitis, for undoubtedly all of these diseases may justly be classed as “Communicable,” the specific infection being communicated to the persons dying of them, and all of which it is well known are “preventible.” To this group may very probably in the near future be added “cancer,” pneumonia, and some forms of dysentery and diarrhoea. Mere reference is here made to the subject in order to indicate the incompleteness of the present arrangement and the direction in which future rearrangement in the classification will possibly be made. Great assistance in the work will undoubtedly be derived from the bacteriological study of diseases.

At the present time it does seem strange to classify, alcoholism, diabetes and gout with tuberculosis, syphilis, and malarial fever, or even cancer,

under the head of "general diseases." However, to permit of ready comparison with other similar reports of vital statistics on this continent no change has been made to that agreed upon.

A Summary of the causes of Death.—In considering the causes of deaths it is found that 1,730 deaths were due to infectious or contagious diseases apart altogether from the deaths caused by tuberculosis and scrofula, which numbered 2,877.

The most fatal of the diseases in this group was diphtheria, 35.1 per cent. of the deaths in this group, being from this alone. The next in order was typhoid fever, with 27.8 per cent., and influenza, 19.1 per cent. Consequent upon the measures taken by local health authorities to prevent the spread of scarlet fever, which in 1903 had been prevalent and which caused 580 deaths in that year, the progress of scarlet fever was very much curtailed in 1904 and the diminished number of deaths, viz., 163, may be largely attributable to this cause, although in some districts of the province the mild character of the disease helped to bring about the improvement in the mortality rate.

The distribution of this class of diseases as shown by the death returns is most interesting. Peel County was apparently the only one free from that now common disease, typhoid fever, while the largest number of deaths were reported in York county, 56 of the 81, however, occurring in the City of Toronto. The newly settled districts of Thunder Bay and Nipissing, coming next in order. In the former district the chief trouble was in the town of Fort William, where the municipal authorities had permitted the conversion of one or two box drains, originally intended for carrying off surface water, into sewers, and the outlets of these drains being above the water intake, contamination of the public water supply occurred with the natural result of an outbreak of enteric fever. The conditions in Nipissing are no doubt largely due to the pollution of the wells, mostly surface wells, by seepage from yards, outbuildings and closets. As regards this disease it is particularly gratifying to note that in the Lake district, Muskoka, only four deaths were reported as due to typhoid.

The widespread character of diphtheria is evidenced by the fact that not a county or district in the province was free from it. The minimum number of deaths therefrom occurred in Oxford county, two being reported. The maximum number being in York, 160; it will however be seen on referring to table 14, that 127 of these were in the City of Toronto.

Attention is drawn to the widespread character of influenza, not a county or district but what has reported deaths from this disease, which since its appearance some years ago in pandemic form has been fatal, more particularly to those at the extremes of life, particularly the aged, not however, has it confined itself to these two classes, on the contrary, many of middle age have fallen victims to its debilitating influence, and if our death certificate required physicians to state thereon both the primary and secondary cause of death, I am satisfied many more deaths would be found attributable to this disease.

TUBERCULOSIS.

To permit of comparison of the deaths per annum from this disease the table given in last year's report is continued. It will be seen that the total number of deaths for 1904 is 154 in excess of 1903. Every county and district lent its quota to make this large total.

Table showing the Number of Deaths from Tuberculosis in Ontario, from 1870 to 1904 inclusive.

Year.	Population.	Number.	Year.	Population.	Number.
1870	Not stated.	886	1889.....	2,148,981	2,417
1771	1,620,851	1,049	1890.....	2,161,971	2,503

1885.....	1,923,610	2,499	1904.....	2,203,968	2,877
1886.....	2,115,971	2,573			
1887.....	2,115,971	2,556	Total.....		79,546
1888.....	2,148,971	2,551			

A comparison of deaths from tuberculosis in the cities and the counties in which these cities are situated and in which they are included in the general returns by counties shows that in the counties in which are situated the largest cities, the greatest percentage of deaths occur therein. Thus of the 439 deaths returned from the County of York, 338, or 77 per cent. took place in the City of Toronto, and, of the 135 deaths credited to the County of Wentworth, 101 or 74.8 per cent. occurred in the City of Hamilton. Similarly in Carleton County of 154 deaths from tuberculosis, 114 or 74 per cent. are found as occurring in Ottawa. In this latter city none of them could have happened outside the municipal limits, for the Division Registrar refuses to grant burial permits when a death from any cause occurs outside the city limits. The examples just quoted are the three largest cities of the province, and apart from the fact that some of the deaths may have been of persons having simply been attracted thereto by reason of the excellent hospital accommodation provided therein, although at the present time this argument has but little weight, for the hospitals refuse patients suffering from this disease. If even this argument is considered we find that the great majority of deaths in the counties of York, Carleton and Wentworth, happened in the cities, and the figures are of sufficient importance for the local health authorities to study the why and the wherefor, and if properly considered lead them to the adoption of active measures to stop this large death rate.

In what may be called the city group of counties, *i.e.*, those in which the cities are situated, there were 1,444 deaths from tuberculosis, or slightly over 50 per cent. of all the deaths happening in Ontario, while the estimated population of these counties was 1,037,011, or slightly under half the total estimated population—the deaths per 100,000 of the population were as follows:

(a) The whole province	1.30
(b) The city group of counties	1.39
(c) The non city group	1.23

A further study of these figures shows the death rate per hundred thousand and of the estimated population of the city group to be as follows:

Brant, 101; Carleton, 157; Elgin, 90; Essex, 143; Frontenac, 153; Hastings, 117; Kent, 115; Lincoln, 155; Middlesex, 165; Oxford, 84; Perth, 89; Wellington, 99; Wentworth, 168; York, 158, from which it will be seen the counties with the larger cities have the highest mortality for this disease, the only exception being the County of Middlesex, in which the death rate exceeds that of any other county of the group excepting Wentworth.

In considering the non city group it is found that the minimum death rate per one hundred thousand of the estimated population occurs in the Rainy River district, the rate being 66, which fact may be accounted for by the district being recently settled and only the hardy of our settlers have gone into the districts. Of the old settled counties, Waterloo has the low rate of 67, with Norfolk, 71; Dufferin, 75; and Haldimand, 79, next in order—while those counties with an extremely high rate are found to be those bordering on the River St. Lawrence, Leeds and Grenville 193, and Stormont, Dundas and Glengarry, 213. The highest death rate is found in Thunder Bay District 228 per hundred thousand, but this can largely be accounted for by an influx of population, chiefly of a foreign character, and also a number of persons dying of the diseases being Indians. With the present lax medical examination of the immigration department of the Dominion Government we cannot expect now arrivals at our ports suffering from this disease to be detected. The result is they go west and living often in the most unsanitary conditions in this extremely western portion of our province, soon become victims of a disease of which I too often fear they have been the sufferers before leaving their European homes. A study of the returns shows that eleven out of the total of 29 were of foreign birth and seven were Indians, wards of the Dominion Government. We thus have only 11 deaths of native born persons which gives a death rate of only 86 per hundred thousand.

The death rate of Muskoka, 155 per hundred thousand of the population, would indicate that deaths occur of persons suffering from tuberculosis who seek this section of the province with the hope of being benefited, but succumb to the disease before being able to return home.

Deaths from Cancer.—The number of deaths from the various forms of cancer were 1,253, being 97 in excess of the previous year. Its distribution was general over the province, not a county but what recorded deaths from either carcinoma, sarcoma or other malignant growths.

Diabetes.—No deaths from this disease were reported in the District of Algoma, and the Counties of Brant, Bruce, Dufferin, Elgin and Essex—with these exceptions this disease would appear to be found generally throughout the province.

Diseases of the Nervous System.—The total number of deaths under this group, 3,694, being 405 in excess of 1903 and representing 11.8 per cent. of the total deaths from all causes. The increases are as follows: Encephalitis, 67; simple meningitis, 133; congestion and haemorrhage of the brain, 72; softening of the brain, 22; paralysis, 203; convulsions (not puerperal), 10. While the decreases are found under epidemic cerebro-spinal meningitis, 26; insanity, 6; epilepsy, 23; and other nervous diseases, 37. The number of deaths from nervous diseases reported in the cities was 1,207 or 27.5 per cent. of the provincial total, and with the exception of the group which includes diseases of old age and infancy, there were more deaths from these diseases than from any other group cause, the death rate in the cities being 207 per hundred thousand of the population. The general conclusion

to be drawn from the figures is that nervous diseases are on the increase in the province. The number of infants dying under 1 year in this group is 645, and 271 between 1 year and under 5, representing nearly one-quarter of the whole.

Diseases of the Circulatory System.—The number of deaths due to diseases of this system was 2,367, a slight decrease, 123, in the returns of the preceding year. The greatest number of deaths occurring in any one month was in March, when 269 were reported, with January a close second, having 267 to its credit, and it will be seen that these are the same two months in which the largest number of deaths happened from diseases of the respiratory system. The minimum, 180, being found in the month of September, which also corresponds with the minimum of deaths from diseases of the respiratory system. The great disparity between the social conditions of those succumbing to this class of diseases is noticeable, 492 of the total of 2,367 being unmarried, and of this number 161 were under 19 years of age. Of the total number of deaths, 1,331 were of the age groups of 60 and over, and 75 per cent. of the total were ascribed to organic diseases of the heart.

Diseases of the Respiratory System.—The total number of deaths in this group is 3,252, being a slight decrease 36, as compared with the year 1903. As stated in the foregoing paragraph, the maximum number of deaths occurred in the month of March, the month perhaps of greatest variations in temperature, the minimum being reached in September. Of the total number of deaths 1,738 or 53.4 per cent. were caused by pneumonia. Turning again to the infantile mortality we find that 625 were under one year and 966 under 5 years of age, or close on 30 per cent., while in the age groups, 60 and over, 1,331 deaths occurred, or 40.9 per cent., clearly indicating the severity of this class of diseases upon the extremely young and those advanced in years, the two groups together claiming 70 per cent. of all the deaths in the group.

Diseases of the Digestive System.—This important group includes not only the diseases of the stomach and alimentary canal, but also includes diseases of the liver and troubles of a surgical character, as appendicitis, hernia and iliac abscess. The total number of deaths was 2,594 of which nearly one-third (852) were infants under 1 year, nearly all of whom must have succumbed to infantile diarrhoea, for 1904 deaths were attributable to this disease. In what may be termed the surgical sub group we find that 174 died of hernia and intestinal obstruction, 333 of peritonitis, and 268 of iliac abscess and appendicitis. Unfortunately the records do not show definitely in how many of the above 775 instances surgical measures were resorted to previous to death, or how long after operation death took place.

Diseases of the Genito-Urinary System.—In this group 1,175 deaths are tabulated, 1,001 of which were due to diseases of the urinary system alone, the remainder being classed under diseases of the genitalia, 22 being male and 152 female. Of the 1,009 deaths attributable to diseases of the urinary system, 185 were from acute nephritis, and 523 from "Bright's Disease."

Deaths from Puerperal Diseases.—The deaths in this class number 274, being almost equally divided between each of the four diseases constituting it.

Malformations, Diseases of Infancy, Old Age, etc.—To this group there must ever be attached the interest associated with the rendering of life's harpsichord both before it has begun to vibrate and after it has lost its tension and tune. The number of "still births" keeps steadily mounting upward.

If the causes were all natural one would not perhaps, think so much of it, but when the tendency of the present day is for families on the permanent unit basis without any intention of extension on this basis, or what is worse still and more criminal, it is in many instances the avowed purpose of our young people entering the married life with the expressed intention of remaining free from family duties and responsibilities. With these facts in view and also having a belief that the sexual instincts are still strong in our vigorous Canadian race, it is with feelings of mingled alarm and remorse I direct attention to this steady increase in still-births in our province. Of the total number, 1,690, the cities returned 546, the towns 86, the remainder having occurred in the rural districts.

Of the deaths from senile decay there were 3,411. Of the counties outside the city group the greatest number of deaths occurred in the following counties: Grey, 158; Leeds and Grenville, 142; Northumberland and Durham, 179; Simcoe, 151, and Stormont, Dundas and Glengarry, 158.

Suicides and Accidents.—Of the former there were 113; of these, 77 were males and 36 females, 40 single and 65 married; in 8 instances the social condition was not known. The youngest suicide was under 14 and the oldest was over 80. The accidents happening in the province shows an upward tendency, the figures showing an increase for the year of 16 over 1903. Of the deaths, 1,050 were males and 258 females, while no period of life is free from deaths by accidents, we find the maximum is reached in the age group 20 to 24, and the minimum is that third or fourth years of child life. It is peculiar to note that not a death occurred as the result of a bicycle accident, and despite the extension of the electric railway system only 19 deaths were due to this cause. The record of 219 deaths by drowning is a strong plea for the systematic teaching of swimming to our school children, and the 186 deaths by railway accidents might be used as an argument that pedestrians and the public of this province have some claim to a right of way and a better protection should be given us at our level crossings. The value to the province of the 186 lives lost under this head in 1904 represents a sum which might have been saved if such restrictions were better enforced.

In conclusion I beg to append the report of the chief clerk upon the office work of the department. The work of the clerks both individually and collectively has been well and willingly done, and to their carefulness the accuracy of the tables is in the main due.

Owing to the fact that the report of the meteorological services of the Dominion has not yet been published. I am unable to give a resume of the weather report of the year 1904.

I have the honor to be,

Sir,

Your faithfully,

CHAS. A. HODGETTS,
Deputy Registrar-General.

REPORT OF CHIEF CLERK.

Toronto, May 29th, 1906.

To CHAS A. HODGETTS, M.D.,

Deputy Registrar-General of the Province of Ontario.

SIR,—I have the honor to submit for your consideration the following statement showing the work done by the staff of the Registrar-General's Department, during the year 1905.

Receiving and entering the returns from about 800 Division-Registrars and issuing 1,600 certificates therefor, addressing and mailing 1,600 semi-annual notices.

INDEXING.

Births indexed, (left over from last year).....	21,000
Births (1904), indexed	44,000
Births (1904), not indexed, 6,265.	
Marriages (1904), all indexed	39,578
Deaths (1904), indexed	17,000
Deaths (1904), not indexed, 14,290.	
Total	121,578

COMPARING.

Births compared, (left over from last year)	48,642
Births (1904), compared	27,500
Births (1904) to be compared	22,765
Marriages (1904), all compared	39,578
Deaths (1904), compared	16,500
Deaths (1904), not compared, 14,790.	

In all 17,120 marriages have been indexed this year from old County Register books of dates prior to 1869, which have lately been received by this department.

The total number of marriage license cards received from issuers up to June last, when the new marriage license regulations came into force, was about 6,400. Since that date these cards have been displaced by affidavits from issuers, on the back of which the card details are given; of these about 9,000 have been received and filed by counties, up to the end of the year.

Under the new regulations all marriage licenses are now sent to this department where they are filed by counties; from June last to the 31st of December, about 6,400 have been received from clergymen and an official receipt made out and mailed on receipt of each license.

All license cards and affidavits giving similar information, are sorted by counties and compared with the index book of marriages. About 800 of these marriages were found unregistered by the officiating clergymen, who were notified by letter, and this year nearly 500 additional returns have been secured and registered by this system.

This work required some 1,200 letters to be sent and replies received.

Over 300,000 blank forms are sent out yearly to some 800 division-registrars, and 1,800 issuers of marriage licenses.

During this year 483,361 registrations of births, marriages and deaths have been compared, which were indexed prior to 1902, when yearly comparing was adopted and added to the work of the Registrar-General's staff.

Compiling annual report and preparing special tables for same. Wrapping, addressing and mailing 6,400 copies to senators, members of parliament, physicians, clergymen, judges, school officials and foreign exchanges, which takes 3 clerks several months each year to complete.

CIRCULARS.

Circular letters addressed and mailed as follows:

To clergymen	2,600
To issuers of marriage licenses	4,600
Total	7,200

Searches have been made and certificates issued during this year, for applicants, as follows:

1,516 searches for births, marriages and deaths, at 25 cents.	\$379 00
324 certificates for births, at 50 cents	162 00
134 certificates for marriages, at 50 cents	67 00
352 certificates for deaths, at 50 cents	176 00
Total	\$784 00

40 books averaging 600 pages, being records received from division-registrars of births, marriages and deaths have been examined and arranged by counties for binding.

All of which is respectfully submitted.

GEORGE WHEELER,
Chief Clerk.

TABLE NO. 1.
Table showing the total number of Births, Marriages and Deaths in each County in 1904.

Counties.	Population.	Births.			Marriages.			Deaths.			Totals.			Ratio to 1,000 of the population.		
		Number in 1904.	Variation from 1903.		Number in 1904.	Variation from 1903.		Number in 1904.	Variation from 1903.		Number in 1904.	Variation from 1903.

TABLE NO. 14.

Total Deaths by Individual Diseases in Cities in 1904.

General Diseases.	Toronto.	Hamilton.	Ottawa.	London.	Kingston.	Brantford.	St. Thomas.	Guelph.	St. Catharines.	Belleville.	Stratford.	Windsor.	Chatham.	Woodstock.	Totals.
I. COMMUNICABLE (EPIDEMIC) DISEASES.															
1. Typhoid Fever	56	9	13	17	4	9	4	1	8	1	5	8	7	4	146
2. Smallpox	2														2
3. Measles	7		5												13
4. Scarlet Fever	11	5	3								1				29
5. Whooping Cough	8		9	3							3				23
6. Diphtheria and Croup	127	14	6	21	7		6	4	3	3		4	6	1	209
7. Influenza	22	10	2	5	2	3	1	3		1		4	2	3	58
8. Other Epidemic Diseases															
II. OTHER GENERAL DISEASES.															
1. Pyæmia and Septicæmia	39	4	5	3	4	2	3	1	3	1	1		1	1	68
2. Malarial Fever	2														2
3. Tuberculosis and Scrofula	338	101	114	62	35	16	7	8	22	13	13	19	17	12	777
4. Syphilis	2		3												5
5. Cancer	187	46	40	42	17	9	5	10	10	6	4	9	5	11	400
6. Rheumatism and Gout	14	5	2	6	5		1			1					35
7. Diabetes	22	3	5	6	4	1	1	1	2	3	1		4	2	55
8. Other General Diseases	43	10	10	14	5	4	2	5	4	2	3	1	1	2	106
9. Alcoholism, Acute and Chronic	4		2												6
LOCAL DISEASES.															
III. DISEASES OF NERVOUS SYSTEM AND ORGANS OF SENSE.															
1. Encephalitis	8	2	1	3	1		4		1						20
2. Simple Meningitis	77	19	20	6	9	9	3	2		2	6	5	2	1	161
3. Epidemic Cerebro-spinal Meningitis	11	2	6						2		1	1			23
4. Congestion and Hemorrhage of Brain	135	44	29	20	10	9	8	11	4	13	4	7	1	6	301
5. Softening of the Brain	15	5	1	2			1	1		1	1	2	1	1	31
6. Paralysis without specified cause	109	19	32	18	22	12	4	8	6	2	5	2	8	2	249
7. Insanity	7		2												9
8. Epilepsy	6	2	2	1											12
9. Convulsions (puerperal)	89	7	30	15	4	6	6	6	5	4		1	2	3	180
10. Other Nervous Diseases	19	3		5	2	1	3	1	2		1	1	2	1	41
IV. DISEASES OF CIRCULATORY SYSTEM.															
1. Pericarditis	8	1	1	1	1	1						1	1		15
2. Endocarditis	16	5	13	3	2	1		2	1	1					44
3. Organic Heart Diseases	276	54	51	41	30	14	11	15	20	16	6	13	10	19	576
4. Angina Pectoris	19	2	1	4			1	2		1			1	2	33
5. Diseases of Arteries, Atheroma, Aneurism, etc.	28	7	2	3		1			1			1			43
6. Other Diseases of Circulatory System			1	1											2
V. DISEASES OF THE RESPIRATORY SYSTEM.															
1. Acute Bronchitis	94	18	25	23	1		3	2	4		1	4	3		178
2. Chronic Bronchitis	13	12	9	2	1	3		1	1	1					44
3. Broncho-pneumonia	90	13	23	1	1	2		1	5		2	7		3	148
4. Pneumonia	204	78	73	44	19	22	11	3	9	30	4	9	13	14	533
5. Pleurisy	17	12	10	3	1	1		2	3			1	3	3	56
6. Cong. of the Lungs (inc. pulmonary apoplexy)	13	8	5	2	2			3	3	2		1		5	44
7. Asthma and Emphysema	10	2	2	4	1							1	1		21
8. Other Diseases of Respiratory System	1														1
VI. DISEASES OF THE DIGESTIVE SYSTEM.															
1. Ulcer of the Stomach	2	4	2	2		1					1			1	13
2. Other Diseases of Stomach (cancer excepted)	20	7	8	5	5	2			1	2		1	1		53
3. Infan. Diarr. gastro enteritis. Chol. Infantum	122	22	93	26	8	5	9	8	8	5	3	8	2	4	293
4. Diarrhœa and Enteritis (not infantile)	12	6	4	6	2	1		1	3	3	2	4			44
5. Dysentery	2		1			1	2								6
6. Hernia and Intestinal obstructions	18	4	8	7	5	5		2	1			2	1	1	54
7. Other Diseases of the Intestines	11	4	5	1	1	1		1				1		1	26
8. Diseases of the Liver	34	8	14	8	5	3		2	2	2	1	3	5	1	89
9. Peritonitis (not puerperal)	62	10	21	2	4	3	6	2	2		3	1	3	3	122
10. Iliac Abscess and Appendicitis	38	6	12	7	7	1	3	1	1		1		1	1	79

TABLE NO. 14.—Continued.

VII. DISEASES OF THE GENITO-URINARY SYSTEM.															
1. Acute Nephritis	56	4	11	2	1	1	3	2	1	2	1	1	2	2	82
2. Bright's Disease	87	31	13	21	6	2	2	3	6	4	6	5	3	2	191
3. Other Diseases of Kidneys and Adnexa	7	1	2	10	2	1	2	1	1	1	1	1	1	1	28
4. Vesical Calculi	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
5. Diseases of the Bladder	12	6	4	3	3	3	2	2	2	2	1	1	1	1	33
6. Diseases of the Male Genital Organs	3	1	1	1	1	1	1	1	1	1	1	1	1	1	7
7. Metritis	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
8. Other Diseases of the Uterus	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
9. Ovarian Cysts and other Ovarian Tumors	3	1	1	1	1	1	1	1	1	1	1	1	1	1	6
10. Other Diseases of the Female Genital Organs	4	2	3	1	1	1	1	1	1	1	1	1	1	1	10
VIII. PUERPERAL DISEASES.															
1. Puerperal Septicemia	2	2	1	1	1	1	1	1	1	1	1	1	1	1	6
2. Puerperal Albuminuria and Convulsions	12	1	4	1	1	1	1	1	1	1	1	1	1	1	20
3. Other Accidents of Pregnancy, sudden death	11	3	1	1	3	1	2	2	1	1	1	1	1	1	26
4. Puerperal Diseases of the Breast	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
IX. DISEASES OF THE SKIN AND CELLULAR TISSUE.															
1. Erysipelas	10	7	1	4	1	1	1	1	1	2	1	1	1	1	28
2. Skin and Adnexa (cancer excepted)	5	1	1	1	1	1	1	1	1	1	1	1	1	1	7
X. DISEASES OF THE LOCOMOTOR SYSTEM.															
1. Pott's Disease	1	1	1	1	1	1	1	1	1	1	1	1	1	1	2
2. Diseases of Bones and Joints	3	1	1	1	1	1	1	1	1	1	1	1	1	1	4
3. Amputation (for unspecified disease)	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
XI. MALFORMATIONS, DISEASES OF INFANCY, DISEASES OF OLD AGE.															
1. Still-Births	258	76	90	34	12	21	7	11	12	4	1	11	6	3	546
2. Congen. Debility and Malformations	412	69	191	47	31	33	9	15	16	8	7	19	12	17	886
3. Other Diseases of Infancy	10	1	11	1	1	1	1	1	1	1	1	1	1	1	27
4. Senile Decay	202	60	82	57	48	28	17	15	13	19	17	15	15	26	614
XII. SUICIDE.															
1. Poison	2	1	1	1	1	1	1	1	1	1	1	1	1	1	5
2. Strangulation	1	1	1	1	1	1	1	1	1	1	1	1	1	1	2
3. Gas Poisoning	1	1	1	1	1	1	1	1	1	1	1	1	1	1	2
4. Drowning	1	1	1	1	1	1	1	1	1	1	1	1	1	1	2
5. Firearms	2	1	1	1	1	1	1	1	1	1	1	1	1	1	3
6. Other Methods	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
XIII. ACCIDENT.															
1. Fractures and Dislocations	20	4	4	8	2	1	1	1	2	4	1	1	1	1	47
2. Gunshot	1	1	1	2	2	1	1	1	1	1	1	1	1	1	5
3. Lightning	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
4. Drowning	19	3	4	1	2	2	1	3	3	2	1	1	1	1	41
5. Electric Cars	11	3	3	1	1	1	1	1	1	1	1	1	1	1	19
6. Bicycles	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
7. Railways	14	5	6	6	2	2	3	1	1	1	1	8	1	5	46
8. Burns and Scalds	19	3	1	1	1	2	1	1	1	4	1	1	1	1	32
9. Homicide	3	1	1	1	1	1	1	1	1	1	1	1	1	1	5
10. Other Accidents	36	19	10	10	3	5	8	2	3	2	1	2	2	2	103
11. Poison	12	1	1	1	1	1	1	1	1	1	1	1	1	1	15
12. Asphyxiation	12	1	1	1	1	1	1	1	1	1	1	1	1	1	13
XIV. ILL-DEFINED CAUSES.															
1. Dropsy	5	1	8	4	7	1	3	1	1	2	1	1	2	1	36
2. Tumors	30	12	14	4	3	5	2	2	1	1	1	2	3	3	77
3. Other Ill-Defined Causes	14	3	14	6	3	5	1	1	1	1	2	3	3	3	65
4. Heart Failure	44	14	26	8	7	5	3	1	1	1	2	6	8	2	119
5. Tetanus	2	1	1	1	1	1	1	1	1	1	1	1	1	1	3

CAUSES OF DEATHS BY CITIES IN 1904.—KINGSTON.

[illegible]

CAUSES OF DEATHS BY CITIES IN 1904. — BRANTFORD.

[illegible]

ST. THOMAS.—Continued.

Number of Column.																			
IV. CIRCULATORY SYSTEM.																			
1.	Pericarditis.....																		
2.	Endocarditis.....																		
3.	Organic Heart Diseases.....	8	3			8	3	7	1										
4.	Angina Pectoris.....	1				1		1											
5.	Arteries, Atheroma, Aneurism, etc.....																		
6.	Other Diseases of Circulatory System.....																		
Total.....		9	3			9	3	3	8	1									
V. RESPIRATORY SYSTEM.																			
1.	Acute Bronchitis.....	2	1			2	1	2	1										
2.	Chronic Bronchitis.....																		
3.	Broncho-pneumonia.....	1				1		1											
4.	Pneumonia.....	5	6			9	2	4	7										
5.	Pleurisy.....																		
6.	Congestion of the Lungs.....																		
7.	Asthma and Emphysema.....																		
8.	Other Diseases of Respiratory System.....																		
Total.....		7	8			12	3	7	8										
VI. DIGESTIVE SYSTEM.																			
1.	Ulcer of the Stomach.....																		
2.	Other Diseases of Stomach (cancer excepted).....	1				1													
3.	Infan. Diarrhoea and Cholera Infantum.....	6	3			8	1	9											
4.	Diarrhoea and Enteritis (not infantile).....																		
5.	Dysentery.....	2				2		2											
6.	Hernia and Intestinal obstructions.....																		
7.	Other Diseases of the Intestines.....	1				1		1											
8.	Diseases of the Liver.....	1	2			1	2	1	2										
9.	Peritonitis (not puerperal).....	4	2			5	1	2	4										
10.	Iliac Abscess and Appendicitis.....		3			3			3										
Total.....		12	13			18	7	13	12										
VII. GENITO-URINARY SYSTEM.																			
1.	Acute Nephritis.....																		
2.	Bright's Disease.....	2				1			2										
3.	Other Diseases of Kidneys and Adnexa.....	1				2													
4.	Vesical Calculi.....																		
5.	Diseases of the Bladder.....																		
6.	Diseases of the Male Genital Organs.....																		
7.	Metritis.....																		
8.	Other Diseases of the Uterus.....																		
9.	Ovarian Cysts and other Ovarian Tumors.....																		
10.	Other Diseases of the Female Genital Organs.....																		
Total.....		1	3			3	1		4										
VIII. PUERPERAL DISEASES.																			
1.	Puerperal Septicæmia.....																		
2.	Puerperal Albuminuria and Convulsions.....																		
3.	Other accidents of Pregnancy, sudden death.....																		
4.	Puerperal Disease of the Breast.....																		
Total.....			2
